

## AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims:

Claim 1 (original): Curable siloxane composition comprising: A) at least one reactive siloxane polymer, wherein the content of the T- and Q-units if present does not exceed 10 mol-% of all siloxy units, B) optionally at least one siloxane cross-linking agent, C) at least one component selected from the group of a catalyst, a sensibilizer and a radical initiator, D) at least one pressure sensitive adhesive, with the proviso that if the pressure sensitive adhesive is an organosilicone compound, the content of the T- and Q-units is more than 10 mol-% of all siloxy units, the content of D-units is more than 10 mol-% of all siloxy units, and at least 90 mol-% of the organo groups in the organosilicone compound are alkyl groups, E) optionally auxiliary additives, and F) optionally solvents.

Claim 2 (withdrawn – currently amended): Curable siloxane composition according to claim 1, wherein component A1) is selected from SiOH-terminated polydimethylsiloxanes, component B1) is selected from ~~SiOR-containing~~ SiOR-containing polyorganosiloxanes and SiOR-containing organosilanes, and component C1) is selected from organometallic compounds, Lewis acids, Lewis bases, Brønsted acids.

Claim 3 (currently amended): Curable siloxane composition according to claim 1, wherein component A2) is selected from alkenyl-containing polyorganosiloxanes, component B2) is selected from ~~SiH-containing~~ SiH-containing polyorganosiloxanes and SiH-containing organosilanes, and component C2) is selected from organometallic hydrosilylation catalysts.

Claim 4 (withdrawn): Curable siloxane composition according to claim 1, wherein component A3) is selected from photocurable polyorganosiloxanes, component C3) is selected from the group consisting of photoactivatable catalysts, sensibilizers and radical initiators.

Claim 5 (previously presented): Curable siloxane composition according to claim 1, wherein component D) is selected from non-reactive polyorganosiloxanes with respect to the component A) or B).

Claim 6 (previously presented): Curable siloxane composition according to claim 1, wherein the component D) is selected from a polyorganosiloxane which is a reaction product between a resinous prepolymer comprising at least M- and at least Q-units and a gumlike prepolymer comprising at least D-units.

Claim 7 (previously presented): Curable siloxane composition according to claim 1, wherein in component D) the molar ratio of D:Q is  $>1$ .

Claim 8 (previously presented): Curable siloxane composition according to claim 1, wherein component D) is selected from polyorganosiloxanes comprising at least one M unit at least one Q unit, and at least one D unit, wherein the ratio of the siloxane units D to Q is  $>1$

Claim 9 (withdrawn): Curable siloxane composition according to claim 1, wherein component D) is selected from polyorganosiloxane blockcopolymers.

Claim 10 (currently amended): Curable siloxane composition according to claim 1, comprising: 100 p.wt. of component A), 0 to 20 p.wt of component B), 1 to 10000 ppm of component C) based on the total weight of the composition, 0.01 to 10 p.wt of component D).

Claim 11 (currently amended): Cured siloxane composition, as obtained by curing the composition according to claim 1.

Claim 12 (original): Use of at least one pressure sensitive adhesive as controlled release agent for siloxane-based release compositions.

Claim 13 (original): Process for modifying the surface properties of cured siloxane compositions which comprises adding at least one pressure sensitive adhesive to a curable siloxane composition and curing the resulting composition.

Claim 14 (original): Process for the coating a substrate, comprising the steps of: applying the composition according to claim 1 onto the surface of the substrate, and curing said composition on the surface of the substrate.

Claim 15 (currently amended): ~~Use of the composition according to claim 1 for the A~~  
process of coating of a substrate, comprising applying to the substrate the composition of  
claim 1.

Claim 16 (currently amended): ~~Use of the composition according to claim for the A process~~  
of preparing preparation of release films, comprising applying to a substrate to be released,  
the composition of claim 1.

Claim 17 (previously presented): Substrate, comprising the composition according to claim 11 on the surface thereof.

Claim 18 (previously presented): Multi-layered product according to claim 17, comprising a release sheet comprising a carrier and a release film and a adhesive sheet comprising of a carrier and an adhesive film, said release film is formed of the composition of claim 10, and being in contact with the adhesive film.
